**RULE 5 and 105.** At Klamath Falls schedule time and train orders of first-class trains apply at Passenger Station. Schedule time of No. 386 and No. 387 apply at train-order office.

At Crescent Lake Shasta Division first-class schedules and train orders referring to such schedules apply at the west switch of the passenger siding. Portland Division first-class schedules and train orders referring to such schedules apply at the east switch of the passenger siding. The main track at Crescent Lake between the east and west switches of the passenger siding may be used by any first-class train if track is known to be clear. Passenger siding is track between main track and station building.

No. 16 stop, if necessary, at Algoma and Modoc Point for U. S. Mail or newspapers.

485.5	526.0		472.7	513.0
			476.7	517.7

**RULE 14.** Light engines arriving Dunsmuir from east, desiring to enter roundhouse lead, will sound whistle signal, "o — o o."

**RULE 14 (d).** As specified below, \_\_\_\_\_ o will be indication that flagman may return from west as prescribed by Rule 99: Siskiyou Line trains to recall flagman between junction switch Black Butte and Weed; Modoc Line trains to recall flagman between Stukel and Klamath Falls; Keswick Branch trains to recall flagman between Redding and Keswick.

**RULE 14 (e).** As specified below, \_\_\_\_\_ will be indication that flagman may return from east as prescribed by Rule 99: Siskiyou Line trains to recall flagman between junction switch Black Butte and Weed; Modoc Line trains to recall flagman between Stukel and Klamath Falls; Keswick Branch trains to recall flagman between Keswick and Redding.

**RULE 14 (k).** Will not apply in C. T. C. System.

**RULE 17.** Mars Signal Light on engines so equipped must not be used.

**RULE S-17.** In C. T. C. will not apply on controlled sidings.

**RULE 19.** Markers must be properly displayed in C. T. C. System. Fig. 7 will not apply on controlled sidings.

**RULE S-72.** Westward trains are superior to trains of the same class in the opposite direction.

**RULE 83.** Eastward trains must obtain train order check of overdue superior trains at Black Butte and westward trains must obtain train order check of overdue superior trains at Redding.

**RULE 83 (A).** At the following stations, only the trains indicated will register:

Gerber—Trains originating and terminating, except eastward second-class and extra trains.  
 Kiska—First-class trains, Eastward second-class and extra trains originating, Dunsmuir Yard  
 Dunsmuir (psgr. station) } Trains originating and terminating.  
 Chemult  
 Grass Lake—Regular trains.  
 Klamath Falls Yard—Westward trains originating at Klamath Falls; Eastward second-class and extra trains terminating at Klamath Falls.  
 Klamath Falls—All trains except westward second- and third-class and extra trains originating.  
 Hornbrook—All trains.

**RULE 83 (B).** At open train-order offices, trains may register by ticket as follows:

Kiska—First-class trains.  
 Grass Lake—Regular trains.  
 Klamath Falls Yard—Westward first-class trains.  
 Klamath Falls—Westward Great Northern R. R. trains.  
 Crescent Lake—Nos. 17, 23, 15, 18 and 24.  
 Operator Gerber will repeat registration of westward third-class and extra trains to Operator Kiska for entry on register.  
 Operator Klamath Falls will repeat registration of eastward first-class trains to Operator Klamath Falls Yard for entry in register.  
 Registration must be repeated for verification.

**RULE S-90.** Eastward freight trains with more cars than will clear between the east portal, Tunnel 13 and east switch, with train orders to meet westward train at Siskiyou, will not move train through tunnel until it has been ascertained that westward train is into clear on siding.

**RULE 93.** Yard limits in which the provisions of Rule 93 will apply are established at the following points:

MP West		MP East
211.84	Gerber.....	216.08
222.04	Red Bluff.....	224.63
256.10	Redding.....	259.23
317.91	Dunsmuir Yard.....	326.60
342.63	Black Butte.....	347.70
	Black Butte, Siskiyou line	346.50
392.15	Mt. Hebron.....	395.46
425.67	Klamath Falls.....	432.43
552.04	Klamath Falls, Modoc line.....	
455.10	Chiloquin.....	459.24
469.08	Kirk.....	471.62
526.60	Crescent Lake.....	530.16
345.64	Weed.....	350.08
374.66	Montague.....	376.34
392.26	Hornbrook.....	394.80
427.08	Ashland.....	430.79

	Alturas, Lakeview branch	460.19
492.33	Hackamore.....	495.22
510.63	Lakeview.....	513.05

**Dunsmuir Yard**—Eastward freight trains must stop to clear crossover just west of Little Castle Creek bridge unless proceed signal received from herder (green flag by day, green light by night).

**Dunsmuir**—Westward trains, except first-class, must not pass absolute signal just east of east switch unless proceed signal received from herder (green flag by day, green light by night).

First-class trains receiving diverging route signal at east switch must not pass this signal unless proceed signal also received from herder (green flag by day, green light by night).

Eastward or westward trains moving on Track No. 1 must not pass Shanty No. 3 located just east of Butterfly Avenue Crossing unless proceed signal received from herder, green flag by day, green light by night.

Westward trains, except first-class and light engines, moving on main track must not pass east switch of the third crossover west of Butterfly Avenue Crossing unless proceed signal received from herder, green flag by day, green light by night.

**Klamath Falls**—Westward trains except first-class approaching Klamath Falls must not pass distant signal 4305 unless flashing white light displayed on mast of this signal which will be authority to move to east switch, where train must stop and not proceed into yard until signal received from herder, green flag by day, green light by night.

Eastward trains except first class must stop before passing signal 4286 unless they receive proceed signal from yardman, green flag by day, green light by night. Yardman must not line switch for eastward trains to enter yard until after train has been identified.

Movements of Great Northern R. R. trains and engines between initial switch east end of yard and Junction switch of Great Northern R. R. will be directed by yardmaster.

**RULE 102.** Following instructions govern handling of a passenger train which has parted on grade between Black Butte and Ashland: On ascending grade, when train has parted, angle cock must be closed at opening, and immediately all hand brakes set on detached portion starting at rear and head end, turning up retainers on all cars as hand brakes are being set. Air brakes must immediately be fully charged on detached portion by using air hose carried in baggage car for that purpose. If for any reason detached portion cannot be recharged immediately, or if necessary to leave rear portion standing, rear truck of detached portion must be chained to rail in such manner as to derail cars should they start. Attempt must not be made to couple to detached portion until brake pipe has been fully charged and chain removed. After train has been coupled, air must be applied from engine before hand brakes and retainers are released.

Emergency hose must be used on freight trains departing Klamath Falls and Dunsmuir Yard and applied at most accessible location approximately every 30th car from engine. Emergency hose must be applied and removed when necessary by trainmen at intermediate stations.

**RULE 104.** The normal position of switches at end of double track and junctions will be as follows:

Redding..... Keswick Branch, for Silverthorn line.  
 Black Butte..... Siskiyou line, for controlled siding.  
 Klamath Falls..... Great Northern R. R. at M.P. 428.4, for S. P. main track.  
 Modoc line at M.P. 427.78, for Cascade line.  
 Chemult..... Great Northern R. R., for S. P. siding.  
 Alturas..... Lakeview Branch, for Modoc line.

Trains using McCloud River Railroad Company's house track at Mount Shasta must leave derail lined and locked in derailing position.

**RULE 105.** Following tracks are designated for use as sidings:  
 Weed—Siding located east of station building on opposite side of main track.

Black Butte-Siskiyou Siding extends from connection to controlled siding at west switch Black Butte to connection to controlled siding opposite east water column. West switch is dual controlled, east switch hand operated. Westward trains must not enter Siskiyou Siding without permission from dispatcher.

Operators will restore switches to normal position for Cascade line trains leaving the siding at train-order office.

**Grass Lake**—Westward freight trains taking siding, stop east of west switch house track. East and west house track switches normally lined for legs of wye. First-class trains with orders to meet or pass, train required to take siding will use passenger siding, located on right side of main track in movement of direction eastward.

**Mt. Hebron**—Track on station side of main track for westward trains. Track on opposite side of main track for eastward trains.

Westward freight trains using siding at Mount Hebron to meet or permit trains to pass, will make a cut in front of telegraph office sufficient to clear the county road crossing for the passage of vehicles and pedestrians, and to avoid the necessity of the operators climbing through train to hand up orders to other trains.

**Siskiyou**—When a westward train is holding main track to meet an eastward train and switch is open for train to enter siding, conductor of train holding main track will arrange to protect the eastward train against light engines or other trains occupying siding, and will give the eastward train sufficient room to avoid stopping engines in tunnel. Westward trains receiving an order to meet an opposing train on track known as turntable lead at Siskiyou (this track is on south side of main track used by helper engines moving to and from turntable) must not pass Signal 4125 until it is known that opposing train has passed Signal 4112 at west end of tunnel 13. Eastward trains or engines will leave turntable lead at east switch located 200 feet west of Signal 4124.

House track at Bray, new team track Redding and passenger siding Grass Lake must be left clear for meeting or passing of trains.

**RULE 221.** Eastward trains, except first-class, will obtain clearance at Kiska and need not obtain clearance at Gerber.

First class trains will not obtain clearance at Kiska.  
First-class trains will not obtain clearance at Dunsmuir Yard.  
Eastward trains originating at Dunsmuir Yard and westward trains terminating at Dunsmuir Yard need not obtain clearance at Dunsmuir (psgr. station).

First-class trains will not obtain clearance at Klamath Falls Yard.  
Westward trains, except first-class, will obtain clearance at Klamath Falls Yard and need not obtain clearance at Klamath Falls.

Light will be displayed in train-order signal at Willow Ranch only when train orders are to be handled.

**RULE 505. AUTOMATIC BLOCK SYSTEM**

Trains or engines stopped by Signal 2141 at Gerber; 3208 or 3209 at Dunsmuir Yard; 3218, 3221 or 3222 at Dunsmuir; 4288, 4293 or 4297 at Ashland; 4292, 4293 or 4295 at Klamath Falls, may proceed with caution, not exceeding 12 MPH.

Routing arm in proceed position on Signal 4112 west of Siskiyou, authorizes train to proceed and enter siding.

**RULE 509 (J).** When necessary to send flagman through tunnel 13, at Siskiyou, train must wait until flagman calls on telephone from opposite end of tunnel.

**RULE 510.** The following block signals, equipped with triangular number plate displaying the letter "P", have included in their control limits a special protective device.

Eastward Trains Signals	GERBER-DUNSMUIR	Westward Trains Signals
P-2240	Spring switch east end siding Glade.....	P-2249
	Fire Protection bridge 259.7.....	P-2597
	Slide detector fence at M.P. 273.7 west end tunnel No. 3.....	P-2749
	Slide detector fence at M.P. 274.1 east end tunnel No. 3.....	
	Fire Protection bridge 278.5.....	P-2793
P-2796	Fire Protection bridge 280.2.....	P-2829
	Fire Protection bridge 282.7.....	
P-2838	Fire Protection bridge 283.8.....	P-2883
	Fire Protection bridge 287.9.....	
	Slide detector fence M.P. 287.6.....	
P-2882	Fire Protection bridge 288.5.....	
P-3014	Slide detector fence at M.P. 302.7.....	P-3031
<b>DUNSMUIR-KLAMATH FALLS</b>		
P-3290	Rock detector fence east of tunnel No. 12, M.P. 329.5..	P-3301
<b>KLAMATH FALLS-CRESCENT LAKE</b>		
P-4422	Rock detector fence M.P. 443.5.....	P-4453

**RULE 512 (B).** Switch indicators and signals located as follows:

Signal 4278 at derail G. N. Bieber line, top unit governs from Bieber line to Cascade line main track; lower unit governs from Bieber line to G. N. line crossing Lake Ewauna.

Signal 4277 at derail from line crossing Lake Ewauna governs to G. N. Bieber line, or S. P. Modoc line.

Signal 4279 just east of G. N. Lake Ewauna line connection on Cascade Line, lower unit governs to G. N. Bieber line or S. P. Modoc line.

Signal 4275.5 at fouling point ladder tracks between tracks 17 and 18 governs from all ladder tracks to Modoc line.

Junction of Great Northern R. R. to Cascade line (Signals 4284-4283).

Should these signals fail to indicate "proceed" after switches are lined wait four minutes for time element relay to function, which will be effective when approach circuit to junction switch is occupied. After operation of time element relay, if signals fail to indicate "proceed," Rules 509 (F) and 99 apply.

Normal indication of Signal 5031 governing movement from Great Northern Railway connection and Signal 5025 governing movement from interchange track at Chemult is "stop." Proceed indication will be displayed after switches and derails are lined for movement if block is clear. Should these signals fail to indicate "proceed" after switches are lined, train may proceed in accordance with Rule 509 (F). All movements to main track must be protected as prescribed by Rule 99.

**RULE 516.** Overlap posts are located at:

**Eastward Trains:**

Red Bluff—300 feet west of east switch. Eastward trains holding main track at Red Bluff will cause westward signal at west end of Glade siding to indicate "stop" when they pass onto the preliminary overlap extending 1300 feet west of Red Bluff station. This preliminary overlap is cut off after time interval and signal at Glade will, after remaining in stop position two and one-half minutes, change to "proceed" providing eastward train at Red Bluff remains west of permanent overlap post.

Leaf —Fouling point west switch.  
Texum —Near middle of siding.

**Westward Trains:**

Pine Ridge—Near middle of siding.  
Ady —Opposite clearance point east end of siding.  
Somerset —Near middle of siding.

**RULE 535. SPRING SWITCHES**

Spring switches are located at the following points, and the indicated speed must not be exceeded while trains are passing over them.

Glade—(Facing point lock.) Trailing from siding to main track eastward normally lined for main track. Speed restricted to 15 MPH.

**RULE 605. INTERLOCKING**

Redding—Interlocking limits extend to interlocking signal 1240 feet east and to interlocking signal 545 feet west of train order signal.

Telephones located on eastbound interlocking signal, near derail on Engine Spur and on relay housing opposite east switch to siding, for use of train and enginemen when conditions require.

Interlocking limit sign located near derail on engine spur. Trains or engines into clear on engine spur must not line switches to, or foul, main track until permission is secured by telephone from operator. Switch and derail to engine spur hand operated.

Interlocking limits Redding adjoins Centralized Traffic Control limit at absolute signal at clearance point east end siding at Redding, and extends westward on main track to interlocking signal governing movements of eastward trains 545 feet west of train order signal Redding.

At the junction of the Keswick Branch M.P. 258.6, a low light type interlocking signal is located at the clearance point on the Keswick Branch, governing westward trains moving into interlocking limit. The normal position is "stop." Westward trains stop before passing the signal.

Telephone located in metal box attached to relay instrument case at junction switch. Call operator at Redding for permission to move into interlocking limit. This signal will indicate "proceed" when junction switch is lined for movement from old line into interlocking limit, and block is clear.

Interlocking signal located at clearance point on Sterling Lumber Company's spur located 100 feet west of the junction of the old line, and the new line at Redding.

Telephone located in metal box attached to relay instrument case at junction switch. Call operator at Redding for permission to move into interlocking limit. Signal will indicate "proceed" when derail and switch are properly lined for movement and block is clear.

"Interlocking limit" sign located at derail at clearance point of spur 700 feet east of passenger station Redding. Call operator on telephone for permission to enter interlocking limit.

Before fouling siding at crossover of house track just east of passenger station, Redding, call operator on telephone for permission to enter siding. When permission obtained, line inside switch of house track before lining siding switch of crossover. Crossover switches east end siding controlled by operator at train-order office. When instructed to operate switches by hand, be governed by sign on relay house opposite west switch of crossover.

**RULE 760. CENTRALIZED TRAFFIC CONTROL SYSTEM**

Centralized Traffic Control System extends from east switch Redding to east switch Black Butte.

The absolute signal just east of the east switch of siding at Redding governs westward trains. When this signal indicates "proceed", trains may move from the limit of the Centralized Traffic Control to the interlocking signal in advance, under authority of Rule 605.

At the west end of Pit River Bridge, there are two 2-indication dwarf light type signals (special signals); one signal governs movement of eastward trains on the main track, and one signal governs movement of eastward trains on the siding.

At the east end of the Pit River Bridge, there are four 2-indication dwarf light type special signals; two signals govern the movement of eastward trains, one for the main track and one for the siding, and two signals govern movements of westward trains, one for the main track and one for the siding.

These signals display "white" for proceed, and "red" for stop, and are identified as "dragging equipment signals".

Trains finding these signals indicating "stop," must stop and make inspection of their train for dragging equipment and obtain dispatcher's permission before proceeding.

Two-unit automatic signals located at various points. When lower unit displays green aspect, be governed by Rule 281 C, Fig. 1.

Three unit absolute signal at the east end of siding at Lakehead governing westward trains is equipped with a "call-on" signal.

Top Unit..... governs movement on main track.  
Center Unit..... governs movement to siding.  
Lower Unit..... governs movement to house track.  
Call-on Signal (Flashing Yellow Light)..... proceed to couple to train on main track or siding.

Helper engine that is to move and couple to a train on main track or siding after receiving proper absolute signal indication, must stop on short track circuit, just east of 3-unit absolute signal, and wait for "call-on" signal to operate. When call-on signal displays a flashing yellow light, it confers authority to pass the 3-unit absolute signal indicating "stop," and move to the train occupying the main track or siding after such train has stopped and hand signal is received from member of train crew.

In Centralized Traffic Control territory, running switches are prohibited over dual control switches. Sanders, blow-off cocks must not be used, injectors must not be opened or closed, or booster started while engine standing on or passing over such switches.

Telephone for communicating with train dispatcher located at:  
Signal 2741 east end tunnel No. 3.  
Signal 2744 west of tunnel No. 5.  
Signal 2760 between tunnels Nos. 6 and 7.  
At absolute signals at M.P. 286.9 (one mile east of Lakehead).  
Signal 2882 between tunnels Nos. 11 and 12.

**RULE 762.** Flag protection to the rear as prescribed by Rule 99 is required by eastward trains standing or delayed on main track with rear of train between Signal 3316 and east switch at Mott; and by westward trains standing or delayed on main track with rear of train between signal 3317 and west switch Mott.

**RULE 763.** Westward trains arriving Black Butte from Cascade Line must display indicators and signals between east and west switch Black Butte and such indicators and signals will be used for identification purposes by eastward trains.

**AUTOMATIC INTERLOCKING**

**Stronghold—**Crossing Great Northern R. R. one-half mile east of Stronghold.

Speed of trains must not exceed 30 MPH between home signal and crossing.

When trains are stopped by signals governing the use of automatic interlocking plants, flagman must be sent to crossing to operate clock-work time release. Release must not be operated when trains are between home signals or seen approaching on intersecting line.

After release has been operated, a red indicator light should be displayed over release and home signal should indicate "proceed" or red indicator on home signal must be displayed. Trains may then proceed.

If red indicator lights are not displayed, trains may proceed over crossing as provided by Rule 663.

Instructions for operating clock-work time release are posted on door of box.

**RULE 705. TAKE-SIDING INDICATORS**

Redding—Located on mast of distant Signal 2564 west of west switch.

## SPECIAL INSTRUCTIONS

## GENERAL REGULATIONS

## RULE 824. INSTRUCTIONS FOR SETTING HAND BRAKES:

## DUNSMUIR AND DUNSMUIR YARD

Passenger Trains.....	{Two brakes on east end. Three brakes on west end.
Freight Trains.....	{Ten brakes on west end. Ten brakes in center of train. Five brakes on east end.

## ASHLAND

Passenger Trains.....	Two brakes on east end.
Freight Trains.....	{Five brakes on east end. Five brakes on west end.

## KLAMATH FALLS

Passenger Trains.....	{Two brakes on west end. Two brakes on east end.
Freight Trains.....	{Five brakes on west end. Five brakes on east end.

Hand brakes on freight trains must be set with the assistance of a brake club after train has stopped. Any employee releasing any of these brakes, must set as many others to replace them.

Engines must not be cut off freight trains at Dunsmuir, Dunsmuir Yard, Klamath Falls or Ashland until sufficient hand brakes are set to secure train and yard air must not be coupled into train until engine is cut off.

When it is necessary to double over incoming freight trains at Dunsmuir Yard, trainmen will secure that portion of train not doubled over, and yardmen will secure that portion of train doubled over, with the required number of hand brakes.

Eastward trains exceeding siding clearance at Siskiyou will cut in helpers a sufficient distance ahead of caboose at Hornbrook to avoid stopping helpers in Tunnel 13.

On arrival at Siskiyou, on westward trains, sufficient hand brakes must be set to hold rear of train before cutting off helper engine, and on rear portion of train when backing down to cut out helper.

Westward freight trains cutting all helpers at Siskiyou will take siding and use braking power track to run around rear portion of train. Cars must not be left standing on main track with engine detached.

**RULE 829.** Trains using siding at Glade will afford a two-hundred-foot clearance east of road crossing near east switch.

**RULE 834.** Will not apply to trains consisting entirely of logs.

**RULE 837.** In yards cars must not be left closer than one car length from fouling point of other tracks.

**RULE 849.** Trainmen on passenger trains will open train heat valve on rear of train at station one-mile board Gerber, Dunsmuir and Klamath Falls, and enginemen will shut off train heat one-half mile from station, except during extreme cold weather at Klamath Falls, train heat valve will be opened on rear of eastward trains at Sixth Street Viaduct and on westward trains at subway just east of Main Street and engineman will shut off steam just prior to stopping at passenger station.

**RULE 862.** Trainmen arriving Gerber on first-class trains will remain on duty and protect their train until outgoing brakemen have inspected train and assumed their proper positions, at which time incoming brakemen will be relieved.

After first-class trains have stopped at Klamath Falls psgr. station, incoming trainmen will set necessary hand brakes and go off duty. Outgoing trainmen must relieve incoming trainmen immediately and afford necessary flag protection as prescribed by Rule 99.

**RULE 869.** Freight brakemen must be on top of train descending grades between Edgewood and Black Butte, Snowdon and Ashland, Grass Lake and Delta, Ambrose and Canby.

On freight trains between Black Butte and Edgewood, Snowden and Ashland, Mt. Hebron and Redding, Kirk and Chiloquin, Ambrose and Canby, member of train crew will observe track from rear of caboose so train may be stopped in event of derailment. Two Dietz Lanterns placed on rear of caboose will be used at night to assist in observing track.

## TRAIN INSPECTION

Trains containing carload shipments of T.N.T., bombs, loaded projectiles, and other such articles of a highly sensitive nature should be stopped for inspection at intervals of not to exceed 50 miles, provided any car in the train containing articles of this nature is loaded in excess of 65 per cent of its marked capacity.

**Page Location**  
All Freight trains, and mixed trains with cast iron wheels, and light engines not equipped with tire coolers except Mallets, on descending grades will stop 10 minutes between switches at the following stations, to permit wheels to cool. Trainmen will make careful inspection of all cars and enginemen inspect engines:

5	Steinman.....	
5	Gregory.....	
5	Hilt.....	Exception—five minutes.
5	Weed or Edgewood	
3	Mott or Azalea.....	Exception—five minutes.
3	Andesite.....	Freight trains that have stopped at Cougar not less than 5 mins., may go to Bolam for inspection without stopping at Andesite, in which event, must make 10 min. stop at Bolam.

5	Canby.....	
5	Hackamore.....	When using retainers.

AC Class engines running light on descending grade stop sufficient length of time to inspect engine.

Light engines descending grade between Hornbrook and Ashland, stop sufficient time at designated freight train inspection stations for inspection of engine and to permit heat of tires to equalize.

In addition to the designated stops for inspection, no freight train will make a continuous run of more than fifty miles without a stop for inspection, except when conditions favorable, eastward freight trains may run Klamath Falls to Lenz, and Kirk to Crescent Lake, westward freight trains Crescent Lake to Kirk and Klamath Falls to Grass Lake, if, in the judgment of conductor and engineer no stops are necessary.

At points where freight trains stop for inspection, they will do so between switches to permit light engines to pass.

Trains handling logs must stop and crew must inspect load and chains before entering Klamath Falls yard, passing through tunnels and over Sprague River bridge west of Chiloquin, Dry Canyon viaduct between Hotlum and Bolam, Klamath River bridge west of Hornbrook, and all crossings except 2nd, 4th, 5th, 14th, 15th, 17th and 18th over Sacramento River.

Between sunset and sunrise, two Dietz lanterns must be placed on rear of caboose and trainmen must observe track for fallen logs.

When a train handling logs takes siding to meet a train or to allow a train to pass, train must be thoroughly inspected to insure proper clearance for safe passage of trains, and no move made until expected train has been met or passed.

Trains, including military trains, made up in part of freight cars or caboose equipped with cast iron wheels are required to comply with rules and timetable instructions applying to freight trains as they relate to stopping for train inspection, and speed restrictions.

## AIR BRAKE RULES

**RULE 3.** Maintain brake pipe pressure of 80 pounds on freight and mixed trains.

**RULE 16.** At Gerber, trainmen must not couple air hoses on outgoing trains until train is made up and engine and caboose on train, and trainmen on passenger trains must not couple steam and air hoses until train is made up.

## FREIGHT TRAINS

**RULE 24.** Rear end test on freight trains must be made immediately prior to leaving:

<b>Page</b>	<b>Location</b>
5	Siskiyou..... All trains.
3	Grass Lake..... Westward trains.
5	Hornbrook..... Eastward trains.
3-5	Black Butte..... Siskiyou Line trains.
5	Ambrose..... Westward trains.

Rear end test must be made between following designated points: Redding and Jerome, Black Butte and Edgewood, Snowdon and Ashland, Perez and Canby, Chiloquin and Kirk, Chemult and Crescent Lake, in accordance with Air Brake Rule 24(b).

When helper engine is in train, after rear end test has been made, the lead engineer must not attempt to start until the helper engineer has sounded Signal 14(b). The helper engineer must not sound whistle until signal is received from rear.

**RULE 33.** One operative retainer for the amount of Ms shown below must be turned up:

<b>Page</b>	<b>Ms per Operative Brake</b>	<b>TERRITORY</b>
2	250	Dunsmuir Yard to Delta.
3	100	Azalea to Dunsmuir Yard.
3	150	Grass Lake to Azalea.
5	100	Black Butte to Edgewood. Ambrose to Canby.
5	150	Snowdon to Hornbrook.
5	90	Siskiyou to Ashland.
5	90	Siskiyou to Hornbrook.

Westward freight trains must turn up not less than ten retainers on head end of train before entering Klamath Falls yard.

## PASSENGER TRAINS

**RULE 39.** Running test on passenger trains must be made at:

<b>Page</b>	<b>Location</b>
5	Snowdon..... Eastward trains.
3-5	Black Butte..... Siskiyou Line trains.
3	Grass Lake..... Westward trains.
5	Ambrose..... Westward trains.

## RULE 46.

<b>Page</b>	<b>Number of Retainers</b>	<b>TERRITORY</b>
3	Accessible	Azalea to east switch Dunsmuir.
3	.....	Shasta Springs or west, if stop is made, retainers may be turned down.
5	All	Siskiyou to Ashland.
5	All	Siskiyou to M.P. 403.6.
5	All	M.P. 400 to Hornbrook.
5	Accessible	Black Butte to Edgewood.
5	Accessible	Ambrose to Canby.
5	.....	M.P. 403.6 to M.P. 400, retainers on head end cars must be left turned up, but should be turned down momentarily if stop is made at Hilt.
5	Accessible	Ashland, will be turned down after passing yard limit board.

Whenever passenger equipment is handled on freight trains and a plug test is made, considerable time must elapse before brake pipe pressure will build up sufficiently to release the brakes on passenger equipment.

Conductor will advise engineman when they have such passenger equipment on the rear of train so he may allow a sufficient length of time for brakes to release before attempting to start train.

Speed of freight trains will be reduced at points where trainmen are required to handle retainers.

If tonnage exceeds amount of Ms specified for each retainer, trains may be handled between Azalea and Dunsmuir Yard, Black Butte and Edgewood, Ambrose and Canby, up to 120 Ms, and between Ashland and Hornbrook up to 100 Ms per operative retainer.

Sufficient retainers will be turned up, in the judgment of engineman, to properly control trains handling logs descending grade between Kirk and Chiloquin, Ambrose and Perez.

Retainers must be turned down momentarily ascending grade M.P. 403.6 to Hilt. Retainers must be turned down if stop is made between Thrall and Hornbrook. The maximum retaining pressure must be used from Siskiyou to Ashland and Siskiyou to Hornbrook on loaded cars, except refrigerators, equipped with the 10-20 and 15-30 pound retainers.

Freight trains consisting of not more than 60 cars and not more than 65 Ms per operative brake may be handled Snowdon to Hornbrook and Grass Lake to Azalea with no retainers provided engineman can properly control speed of train and charge brake pipe to standard pressure between applications. If necessary to use retainers to control speed of train, engineman will instruct train crew number of retainers required.

The tonnage of any freight train between Hornbrook and Ashland must not exceed 100 Ms per operative brake when handled on descending grade by AM, F or SP class engines. When other class engine used 90 Ms per operative brake will govern. Westward trains must not be moved out of Ashland in excess of this tonnage per operative brake. The tonnage of any freight train descending grade between Mount Shasta and Dunsmuir, Black Butte and Edgewood, and between Ambrose and Canby must not exceed 120 Ms per operative brake.

## MISCELLANEOUS

1. Helper engines coupled in middle or rear of train must be cut off from forward portion before taking water, and where lead engine cannot handle forward portion without assistance of helper, latter must not be cut off until forward portion has stopped beyond water tank.

Water supply—Cantara—Three-fourths mile east.

Grenada—One-fourth mile east.

Klamathon Tank—M.P. 390.5.

Whittier Tank—M.P. 485.8 Lakeview Line.

Orcal Tank—M.P. 403.6 Siskiyou Line.

SPECIAL INSTRUCTIONS

Take water only in emergency at following points:  
Stronghold, Hackamore and Orcal tank.

Leading and helper engines must not cut off from head and rear portion of train at the same time at Steinman when taking water. When leading engine is coupled to train, after taking water, engineman will place automatic brake valve on lap, then sound one long whistle signal. Helper engineman will then make fifteen pound reduction of brake pipe pressure, leading engineman noting fall of brake pipe pressure will release brakes and after brake pipe has been charged, helper engine may then be cut off. Trainmen will not cut off helper engine until advised by helper engineman that brake pipe has been recharged.

4. Helper service: No helper engine will be placed behind wooden underframe cars or cabooses.

Engines weighing more than 210,000 pounds on the drivers will not be placed behind cabooses.

In no case will more than one helper engine be placed behind steel underframe cabooses.

Not more than one F or AC class engine shall be placed on head end of freight trains except on trains consisting entirely of logs between Leaf and Grass Lake, Canby and Ambrose. F or AC class engines must not be coupled ahead of engines smaller than consolidation when tonnage behind such engine is in excess of time-table rating. Between Ashland and Hornbrook, helpers must be placed in rear of train.

4a. Pushing trains out of yards: No engine will be placed behind a wooden underframe caboose or other wooden frame equipment.

Engines weighing more than 210,000 pounds on the drivers will not be placed behind steel underframe cabooses.

Air will not be coupled through the pusher engine.

Yard engines regularly so used will be equipped with Russell-Jordan device to hold the coupler pin from dropping, thus making it unnecessary for employes to uncouple the pusher engine when cutting off.

In no case shall the knuckle be removed, or closed, or cutting lever temporarily fastened in release position on a pusher engine, as means of preventing coupling being made.

Unless local conditions require, it will not be necessary to stop trains to detach pusher engines.

When necessary to occupy McCloud River R. R. Company's tracks at Mount Shasta, including the west leg of wye, it must be under protection of flag.

Tracks, except main track at Leaf, are used by engines and motor cars of the Long Bell Lumber Company, and all movements over these tracks including both legs of wye, and to Long Bell siding must be made with caution.

7. Capacity of sidings between clearance points is based on an average car length of 49 feet not including engines and caboose.

Figures between station names on schedule pages indicate distance from initial switch of siding at one station to initial switch of siding at next station.

10. Look out for falling rocks between Algoma and Modoc Point.

14. During dry season, use sprinklers on engines so equipped when passing through all tunnels, and on all bridges. If engine is not equipped with sprinkler and it is possible to do so, tire coolers should be operated through tunnels and on bridges.

Sprinklers are to be kept open while train is in motion; where long stops are made they will be closed temporarily to avoid waste of water.

20. Handling of freight cars in train behind passenger cars is prohibited, except passenger equipment may be placed in head end of mixed trains when carrying personnel and equipment in connection with military and naval movements. The term "freight car" does not include a baggage, express, or mail car, or a caboose. Baggage, express, mail, refrigerator or other head end cars must not be handled on rear of passenger trains unless trainmen can pass through them.

Passenger equipment handled in freight trains must be placed between cars equipped with carmen cutting lever.

Gas transport cars when handled in freight trains should be placed next ahead of caboose.

Cars with inoperative couplers, containing perishables or live stock, may be chained in train and moved to nearest available repair point. Other cars with defective couplers will be switched to the rear of caboose, using operative coupler by turning car. Car and caboose should be chained to prevent breaking away from train. Cars chained may be moved to nearest repair point in direction train is moving.

24	2.30	38	1.74	52	1.09	67	0.94	95	0.38

Speed restrictions for engines are shown in speed restriction table; however, attention is called to the following maximum speeds at which tenders may be operated:

Tenders having water capacity 7,000 gallons or less, except classes 70-R-1 and 70-SC-1, maximum speed 50 MPH.

Following engines are cross counter-balanced and must not exceed 75 MPH.

All GS-1, 2, 3, 4, 5. Mt 1, 2, 3, 4, 5. All P-7, 8, 10, 12 except 2470 and 2477.

Following engines are cross counter-balanced and must not exceed 55 MPH.

F-1, 3, 4, 5; 3612, 3615, 3619, 3625, 3634, 3636, 3652, 3656, 3658, 3665, 3666, 3668, 3676, 3677, 3681, 3682, 3683, 3685, 3687, 3692, 3701, 3706, 3709, 3711, 3716, 3717, 3727, 3728, 3732, 3737, 3742, 3752, 3765.

All AC-4, 5, 7, 8, 10 and 11.

Where mail, papers, or ice are to be dispatched from passenger trains at points where train does not stop, slow down sufficiently to permit safe dispatch without hazard, and stop at such stations for this purpose if train is moving on adjoining track between passenger train and point of exchange.

Engines operated coupled tender to tender must not exceed speed permitted engines running backward.

Maximum speed for Gas-Elec. cars when backing 60 MPH but must not exceed speed permitted when handling Passenger Trains.

**SPEED RESTRICTIONS**

(Unless otherwise further restricted by time table, slow board, or train order)

PAGE	MPH
2-3-4-5	35
5	25
All	25
2-3-4-5	20
All	15
2-3-4-5	25
All	15
2-3-4-5	35
5	25
All	25

Maximum speed (in MPH) of disabled engines (except S or SE), running under own steam or hauled in train, must not exceed:

- When all the weight has been removed from any one pair of drivers... 20
- When all the weight has been removed from only one wheel of any pair of drivers... 30
- When engine truck is removed... 20
- When main rod only is removed... 30
- When side rod only is removed... 30
- When both main and side rods are removed... 20
- When hauled in train, all rods on... 30
- Class S and SE engines, under all conditions... 20

Blocking of leading drivers of an engine, in order to redistribute weight, should not be attempted as this may cause derailment.

All cars handled in passenger trains must be equipped with steel-tired or all steel wheels.

Maximum speed for passenger trains handling box cars equipped with steel wheels and trains consisting entirely of system or foreign line box cars so equipped is 60 MPH. When such cars are equipped with high speed trucks and proper braking equipment and pass required terminal inspection they may be handled in regular passenger trains at passenger speeds.

Wooden passenger-carrying cars, wooden baggage, express and other head end cars, unless equipped with steel center sills and steel platforms must not be used in passenger trains. Speed of trains handling such cars restricted to 40 MPH.

If consist of train includes both wooden and steel passenger-carrying cars, the wooden cars must be kept together and handled on rear.

Trains consisting of engine and caboose only, may operate at speed of 25 MPH between Delta and Mount Shasta.

Do not exceed 25 MPH over No. 14 switch connection to new main line east of overhead bridge east end Redding Yard.

Trains consisting of engine, flanger and caboose may operate at maximum allowable speed of freight trains. In curve territory where maximum speed of passenger trains is 30 MPH flangers will be permitted to operate at same speed.

Planing mill tracks 1 and 2 of Long Bell Lumber Company at Weed will not be switched except between hours of 10 A.M. and 4 P.M. Yardmen will not ride on top of cars when using these tracks.

Tracks adjacent to P. F. E. icing platforms at Klamath Falls and Ashland have side clearance of less than 7 ft. 8 in.

Employees are warned that it is dangerous to stand erect on top of cars or to ride on side of cars while passing these points and that they must protect themselves from injury.
