| Roseburg Subdivision First Response Telephone Numbers |  |  |  |
| :---: | :--- | :---: | :---: |
| MP | Contact | Non-Emergency | Emergency |
| $645.1-621.0$ | Lane County Sheriff's Office | $(541) 687-4150$ | Same or 911 |
| $621.0-504.0$ | Douglas County Sherriff's Office | $(541) 440-4471$ | Same or 911 |
| $504.0-468.0$ | Josephine County Sherriff's Office | $(541) 474-5123$ | $(541) 474-5115$ or 911 |
| $468.0-440.7$ | Jackson County Sherriff's Office | $(541) 776-7132$ | $(541) 776-7208$ or 911 |

| Siskiyou Subdivision First Response Telephone Numbers |  |  |  |
| :---: | :---: | :---: | :---: |
| MP | Contact | Non-Emergency | Emergency |
| $440.7-405.0$ | Jackson County Sherriff's Office | $(541) 774-6800$ | $(541) 776-7208$ or 911 |
| Gold Hill, OR | Gold Hill Police Department | $(541) 776-7206$ | 911 |
| $405.0-349.0$ | Siskiyou County Sherriff's Office | $(530) 841-2908$ | $(530) 841-2900$ or 911 |

## RailAmerica

## Our mission is to consistently exceed customer expectations with the highest degree of integrity, safety, and service CORE VALUES

## INTEGRITY

We speak and act with truth and honesty.

## RESPECT

We treat others as we wish to be treated.

## FACT-BASED

We make recommendations and decisions based upon objective evidence.

## HEADS IN THE GAME

We continuously seek to improve, and we remain focused on our challenges.

## HANDS ON

We actively strive for results in our areas of responsibility, and we help one another for the success of the team. We are all expected to contribute to performance improvement.

## DEMANDING PARTNER

Our standards are high. We expect from others what we expect from ourselves, and we collaborate to achieve the best results for all.

| Dispatch | Rice Hill - Medford | $55-08$ | 5 |
| Trains | Rice Hill - Medford | $08-08$ | 6 |

Contact the dispatcher, tune to channel 5 or 9 and use *114 on the mic. Use *119 for emergencies and use \#0 to hang up when call is complete.

## 9. SPECIFIC SWITCH INSTRUCTIONS

## Tolo MP 450.2:

Crews operating to White City may leave the South Wye switch lined and locked in the reverse position. On return, switch must be lined and locked in the normal position.
Riddle, MP 542.2, Track 6485, LVL Track:
Derail is equipped with a Roseburg Forest Products lock.

Cornutt, MP 540.3 after completion of work, switches on both ends of siding must be lined and locked for industry to prevent movement onto our main track.
Dillard, MP 562.0:
Normal position for the switch at the north end of track 6424 is lined for track 6426. Switch must be left lined in normal position after each use.
Springfield Jct., MP 644.3, Rule 8.8:
Wye switches are equipped with U.P. locks
Eugene Locomotive Facility:
Tracks 49, 50 and 51 at Eugene Roundhouse and service track 1 and 2 from a point 300' south of switch \#501 northward to and including the sanding facility are designated as Locomotive Maintenance tracks. Tracks 49,50 and 51 are maintained by CORP MOW.
10. DEFECT DETECTOR LOCATIONS

| LOCATION | TYPE | LOCATION | TYPE |
| :---: | :---: | :---: | :---: |
| MP 452.8 | F1 | MP 575.2 | F1 |
| MP 463.0 | E1 - E2 | MP 583.0 | E1-E2 |
| MP 475.0 | F1 | MP 591.0 | F1 |
| MP 482.8 | E1-E2 | MP 602.2 | E1-E2 |
| MP 491.0 | F1 | MP 623.3 | E1-E2 |

| MP 509.8 | E1-E2 |  |  |
| MP 516.5 | F1 |  |  |
| MP 522.3 | E1-E2 |  |  |
| MP 542.7 | E1-E2 -F2 |  |  |

## 11. LOCATIONS NOT LISTED AS STATIONS NONE

## 12. OTHER SPECIFIC INSTRUCTIONS

## A. BLOCK SIGNALS EQUIPPED WITH "P" PLATES:

NORTHWARD
5574

5632

6418

PROTECTION
Slide detector fence between mileage 558.8 and 559.1
Slide detector fence between mileage 563.7 and 563.9

Hi load detector, highway underpass mileage 642.3

SOUTHWARD 5591 5651 6429

## B. LEAVING CARS UNATTENDED:

When cars are left unattended at the Divide, Rice Hill, Leland, Hugo and Merlin, rail skids must be placed under the first wheel in the descending direction on the opposite rail of the derail and wheel moved onto skid. Employees are not relieved from securing sufficient hand brakes.
Rail skids are located at the north and south end at Divide, Rice Hill, Leland, Hugo, and at the north end of Merlin. When picking up cars at these locations, the skid must be replaced under car or hung on post and locked. If rail skid is found to be missing, dispatcher must be notified immediately and cars must not be left unattended unless permission is obtained from the proper authority.

## Merlin, MP 482.5, Charging Necessary Air Brakes, Rule 7.11:

When switching tracks 6756 or 6760 , air brakes must be in service on all cars. Cars must not be detached while in motion. After coupling to cars, air brakes must be cut in and operative on all cars being handled

Dillard, MP 562.0, Tracks 6434 and 6435:
When cars are left unattended a sufficient number of hand brakes must be set on each end of cut to prevent movement, should the hand brakes on the opposite end be released..

Divide, MP 621.9, Rule 6.32.6:
When a train stops, blocking Martin Creek Road, MP 622.2, a member of the crew will immediately proceed to the crossing to be available to cut the train and clear the crossing within the lawful time when vehicular traffic is waiting to cross. Train should remain cut until ready to proceed.

Latham, MP 625.0, Rule 6.32.4:
Rachel Rd., cars must not be left standing on storage track between crossing and signs placed 175 feet south and 200 feet north of crossing. In addition, white stripe has been painted on the side of rails to help identify restricted area.

## Cottage Grove, MP 626.5:

Trains moving on siding must stop short of Main St. crossing mileage 626.6, to allow crossing warning devices to operate before entering the crossing.
Walker, MP 630.6:
Locomotives left anywhere except the extreme North end of the siding must be shut down. Locomotives on the extreme North end of the siding may be left running, but must be within 10 car lengths of the North switch.

## C. GRADE CROSSINGS

When approaching grade crossings at the following locations and the strobe light on the control case is flashing comply with rule 6.32.2
MP 527.4 Union Creek
MP 521.5 West Fork
MP 521.1 Riddle-Glendale 321
MP 516.5 Riddle-Glendale 321

## D. EUGENE YARD

All movement entering or moving within yard limits between MP 642.0 and MP 644.3 must be made at restricted speed unless operating under a block signal indication that is more favorable than approach.
E. IMPAIRED SIDE CLEARANCE, RULE 1.20:

| MP | Description | MP | Description |
| :---: | :---: | :---: | :---: |
| 456.8 | Bridge | 523.9 | Rock Cut |
| 458.7 | Bridge | 525.0 | Rock Cut |
| 482.6 | Bridge | 526.7 | Rock Cut |
| 490.6 | Tunnel 9 | 526.9 | Rock Cut |
| 505.2 | Tunnel 8 | 528.1 | Rock Cut |
| 509.2 | Bridge | 539.3 | Rock Cut |
| 514.1 | Tunnel 7 | 550.1 | Bridge |
| 514.7 | Tunnel 6 | 578.0 | Bridge |
| 515.7 | Tunnel 5 | 589.9 | Bridge |

| 516.0 | Tunnel 4 | 607.8 | Bridge |
| :---: | :---: | :---: | :---: |
| 518.6 | Tunnel 3 | 608.6 | Bridge |
| 519.0 | Rock Cut | 610.7 | Bridge |
| 521.0 | Tunnel 2 | 620.2 | Rock Cut |
| 521.1 | Bridge | 625.5 | Bridge |
| 521.4 | Bridge | 627.4 | Bridge |

Riddle, MP 544.2:
Various overhead and side impairments exist on Track 6479 serving Roseburg Lumber Co. Impairments include door frames of entry doors, pipes on north wall of building, and ladders at fire escapes along the north wall. The door frames are impaired at both ends and pipe and ladder impairments are spaced at intervals within the building. Do not ride on side of cars or engine when passing these locations.
MP 579.3, Do-Able, Track 6060:
Impaired clearance from road crossing to end of track with impairments on the west side of track, 300 ' past north entrance of building and at a point 39 ' past the first impairment also on the west side of track.

MP 634.9, Bald Knob:
Impaired side clearance both sides of industry. Locomotive is not to go onto trestle. To spot Bald Knob, there must be (6) cars between locomotive and cars to be spotted.

Caution: There may be other permanent and/or temporary close clearances not listed in this timetable.

## F. MAXIMUM TONNAGE RATINGS:

| TERRITORY | GP38 | GP 20D | SD40 |
| :--- | :---: | :---: | :---: |
| Eugene to Roseburg | 850 | 1000 | 1300 |
| Roseburg to Grants Pass | 750 | 900 | 1200 |
| Grants Pass to Medford | 1575 | 1850 | 2000 |
| Medford to Grants Pass | 2800 | 4200 | 4400 |
| Grants Pass to Roseburg | 750 | 900 | 1200 |
| Roseburg to Eugene | 850 | 1000 | 1300 |

## G. GRADE RESTRICTIONS:

On the following descending grades determine the maximum allowable speed from the following table, taking into account the trains TPOB and tons per axle of operative dynamic brake.

Oakland and Divide
Grants Pass and Glendale

|  | Tons Per Axle Operative Dynamic Brake |  |  |
| :---: | :---: | :---: | :---: |
| Tons Per Operative Brake (TPOB) | 300 or less | $300+$ to 500 | $500+$ to 530 |
| Below 100 | 25 MPH | 25 MPH | 20 MPH |
| 100 to 110 | 25 MPH | 20 MPH |  |
| 110.1 to 140 | 20 MPH |  |  |

A train must be STOPPED and sufficient hand brakes set to prevent movement if any of the following conditions are encountered en-route:

- The tons per operative dynamic brake exceed the limits listed in Table
- A total failure of dynamic brakes is encountered
- More than a 15 pound brake pipe reduction is required to control train speed (ABTH A-3)

Notify the train dispatcher immediately if any of the above conditions are encountered. The train dispatcher will notify the proper authority, who will contact the train and provide further instructions for movement.
Retainers must be set prior to departing Divide or Oakland, or Grants Pass or Glendale if it is known prior to departure from these stations that tons per operative dynamic brake will be exceeded. The dispatcher must also be notified immediately that the use of retainers is required.

See retainers as detailed by ABTH rule 103.7.6

## H. COUPLER LIMITS:

The tonnage handled by the locomotive consists of a train must not exceed the following limits on an ascending grade. To determine tonnage handled by the locomotive consists when the train has a rear-end or entrained helper, subtract total locomotive tonnage ratings for the helper engine from the train's adjusted tonnage.

| Northward: | Grants Pass - Glendale | 5,500 tons |
| :--- | :--- | :--- |
|  | Oakland - Yoncalla | 6,500 tons |
|  | Safely - Divide | 6,500 tons |
| Southward: | Yoncalla - Oakland | 6,500 tons |
|  | Glendale - Grants Pass | 5,500 tons |

Northward trains with entrained helpers operating between Roseburg and Divide must not exceed a maximum of 125 cars. Helper Engines must be positioned to push against $2 / 3$ of train tonnage and pull $1 / 3$ of train tonnage. Helper may be repositioned after reaching Divide to satisfy blocking requirements.

## I. DILLARD:

When making shoving moves at Dillard, movement must be stopped and the crossing must be flagged at the following crossings or when cars are left on an adjacent track and the crossing flagged before proceeding over the crossing.

| Roseburg Forest Gate 1 | MP 561.3 |
| :--- | :--- |
| Roseburg Forest Gate 2 | MP 560.95 |
| Roseburg Forest Gate 3 | MP 560.7 |
| Roseburg Forest Gate 4 | MP 560.2 |

## J. RIDDLE:

MP 544.2, Riddle, Track 6472 only. Prior to occupying crossing, train crew must place crossing actuating switch, which is located on the pole with stop sign into the activate position. When crossing is no longer occupied, actuating switch must immediately be returned to normal position. Actuating switch must be left locked in normal position prior to leaving track 6472. If lock is missing or inoperable, contact the train dispatcher immediately for a replacement lock.

## 4. JOINT OPERATIONS

BLACK BUTTE:
CORP Crews must contact U.P. Dispatcher 66 (800) 726-1167 to obtain Track Warrant and Track Bulletins before departing from Weed for Black Butte. Warrants, Bulletins, General Orders and Notices will be faxed to the Weed Depot.
CORP Trains and Engines may occupy Black Butte Controlled Siding for interchange purposes, after first obtaining authority from U.P. CTC Dispatcher 66 on (AAR) channel 45-45. Signal into south siding and signal to depart Black Butte will be controlled by Dispatcher 66.
Lighting system at Black Butte is radio controlled. To turn lighting system on, go to (AAR) channel $45-45$ and press $3452^{*}$. To turn lighting system off, press 3452\#.

Contact the dispatcher, tune to channel 3 and use *114 on the mic. Use *119 for emergencies and use \#0 to hang up when call is complete.

## 9. SPECIFIC SWITCH INSTRUCTIONS:

None
10. DEFECT DETECTOR LOCATIONS:

| LOCATION | TYPE | LOCATION | TYPE |
| :---: | :---: | :---: | :---: |
| MP 353.4 | F1 | MP 402.1 | F1 |
| MP 363.0 | E1 - E2 | MP 407.5 | F1 |
| MP 384.8 | E1 - E2 | MP 417.3 | F1 |
| MP 398.0 | F1 | MP 423.3 | E1 - E2 |
| MP 401.4 | F2 |  |  |

## 11. LOCATIONS NOT LISTED AS STATIONS:

None listed.

## 12. OTHER SPECIFIC INSTRUCTIONS:

## A. LEAVING CARS UNATTENDED:

When cars are left unattended at Siskiyou Station, MP 412.2, rail skid must be placed under the first wheel in the descending direction and wheel moved onto skid. Employees are not relieved from securing sufficient hand brakes. Rail skid is located at the north end Siskiyou siding and run-around. When picking up cars at this location, the skid must be hung on post and locked.
B. IMPAIRED SIDE CLEARANCE, RULE 1.20:

| MP | Description |
| :---: | :---: |
| 411.3 | Tunnel 13 |
| 414.6 | Tunnel 14 |
| 415.2 | Tunnel 15 |

## Caution: There may be other permanent and/or temporary close clearances not listed in this timetable.

C. MAXIMUM TONNAGE RATINGS:

| TERRITORY | GP38 | GP 20D | SD40 |
| :--- | :---: | :---: | :---: |
| Medford to Ashland | 1575 | 1850 | 2000 |
| Ashland to Hornbrook | 475 | 675 | 800 |
| Hornbrook to Montague | 950 | 1100 | 1300 |
| Montague to Black Butte | 750 | 900 | 1200 |
| Black Butte to Hornbrook | 1575 | 1850 | 2000 |
| Hornbrook to Ashland | 475 | 675 | 800 |
| Ashland to Medford | 2800 | 4200 | 4400 |

D. GRADE RESTRICTIONS:

On the following descending grades the appropriate table must be used to determine the maximum allowable speed, taking into account the trains TPOB and tons per axle of operative dynamic brake.
Ashland and Hornbrook MP 353.0 and Black Butte

Table A
Table B

TABLE A

|  | Tons Per Axle Operative Dynamic Brake |  |
| :---: | :---: | :---: |
| Tons Per Operative Brake (TPOB) | 205 or less | $205+$ to 250 |
| Below 80 | 20 MPH | 20 MPH |
| 80 to 115 | 20 MPH | 15 MPH |

TABLE B

|  | Tons Per Axle Operative Dynamic Brake |  |  |
| :---: | :---: | :---: | :---: |
| Tons Per Operative Brake (TPOB) | 300 or less | $300+$ to 500 | $500+$ to 530 |
| Below 100 | 25 MPH | 25 MPH | 20 MPH |
| 100 to 110 | 25 MPH | 20 MPH |  |
| 110.1 to 140 | 20 MPH |  |  |

A train must be STOPPED and sufficient hand brakes set to prevent movement if any of the following conditions are encountered en-route:

- The tons per operative dynamic brake exceed the limits listed in Table A or B
- A total failure of dynamic brakes is encountered
- More than a 15 pound brake pipe reduction is required to control train speed (103.7.4)

Notify the train dispatcher immediately if any of the above conditions are encountered. The train dispatcher will notify the proper authority, who will contact the train and provide further instructions for movement.
Retainers must be set prior to departing Ashland or Hornbrook if it is known prior to departure from these stations that tons per operative dynamic brake will be exceeded. The dispatcher must also be notified immediately that the use of retainers is required.

See retainers as detailed by ABTH rule 103.7.6
Southbound trains must contact dispatcher when departing Medford when passing MP 412 and when arriving at Hornbrook.

Northbound trains must contact dispatcher when departing Hornbrook, when passing MP 412 and when arriving at Medford.

## E. COUPLER LIMITS:

The tonnage handled by the road engine of a train must not exceed the following limits on an ascending grade.
No more than 7 GP38 or SD40 locomotives may be operated on line in consist. Empty cars must be placed on rear of train only, behind loaded cars.

| Northward: | MP $393.0-$ MP 429.0 | 4,000 tons |
| :--- | :--- | :--- |
| Southward: | MP 429.0 - MP 393.0 | 4,000 tons |
|  | Gazelle - Black Butte | 4,700 tons |

## F. PLACEMENT OF EMPTY CARS:

Between MP 428.0 and Hornbrook, loaded cars must be placed on head end of train.

## G. RUNNING AIR BRAKE TEST:

Perform a running air brake test to insure that brake pipe is complete at the following locations:

- Northward trains will perform the running air brake test between MP 400 and MP 402.
- Southward trains will perform the running air brake test between Medford and MP 412.

Dynamic braking system must be tested as soon as possible after departing Medford.

## H. BLACK BUTTE, MP 344.0, RULE 8.8:

Wye switches are equipped with U.P. switch locks.

## I. MP 411.7 SISKIYOU SUBDIVISION TUNNEL \#13:

## EMERGENCY EVACUATION PLAN

Employees of the Central Oregon and Pacific Railroad are not permitted to ride on the side of moving equipment through the tunnel or be outside of the cab of the locomotive while it is operating through the tunnel.
If a train is stopped in the tunnel for any reason the train crew must separate the locomotive from the cars in the train and immediately exit the tunnel after securing as necessary any equipment left in the tunnel. If the locomotives cannot be moved from the tunnel, they will be secured and shut down.
Employees must always take the safest course and exit the tunnel if an incident occurs ensuring enough hand brakes are applied to secure equipment.

Train crew will immediately notify the Train Dispatcher of the incident, and the Train Dispatcher will notify the Trainmaster who will take control of all activity and give instructions to employees before any employees re-enter the tunnel after an incident in the tunnel.

Trainmaster and or other Managers will job brief the crew and other employees as necessary, advising when they can re-enter the tunnel after an emergency evacuation incident.

The Train Dispatcher will not allow any follow up movements between MP 410 and MP 414 on the Siskiyou Sub. until the train crew operating through the tunnel contacts the Dispatcher and advises that the rear of the train has cleared the tunnel or that a reverse movement, if necessary has been completed.
Locomotives operating through the tunnel will have with them emergency escape breathing apparatus and gas monitor in case of emergency. The breathing apparatuses are good for TEN MINUTES of filtered air. This device is used for escape use only. The gas monitor will be used for monitoring air quality if the train is stopped in the tunnel.
The Trainmaster and Track Inspector have gas monitors and will advise when it is safe to enter the tunnel after an incident, and direct the activity to re-enter and clear the tunnel.
This emergency Evacuation Plan will be verbally discussed with all employees before operating through the tunnels.

## WHITE CITY SUBDIVISION <br> SPECIAL INSTRUCTIONS

1. MAXIMUM AUTHORIZED SPEED

10MPH
2. PERMANENT SPEED RESTRICTIONS:

None
3. MAIN TRACK AUTHORIZATION:

MP 449.8 TO MP 456.6 $\qquad$
4. JOINT OPERATIONS:

When operating beyond sign reading, "Entering WCTR Switching Limits" at mileage 454.4, crew must attempt to contact WCTR switch crew on channel 38-38 to notify them that they are working within limits.
5. RAILROAD CROSSINGS AT GRADE AND JUNCTIONS:

None
6. INDUSTRIAL SPURS:

| P-7349 | White City | Certainteed |
| :--- | :--- | :--- |

7. FRA EXCEPTED TRACK:

None
8. RADIO CHANNEL INSTRUCTIONS:

| RAILROAD | AAR CHANNEL | CHANNEL \# |  |
| :---: | :---: | :---: | :---: |
| CORP | Dispatcher | $85-23$ | 3 |

| CORP | Trains | $23-23$ | 4 |
| :--- | ---: | :---: | :---: |
| CORP | Dispatcher | $55-08$ | 5 |
| CORP | Trains | $08-08$ | 6 |
| WCTR | $38-38$ |  |  |

## 9. SPECIFIC SWITCH INSTRUCTIONS:

## Tolo MP 450.2:

Crews operating to White City may leave the South Wye switch lined and locked in the reverse position. On return, switch must be lined and locked in the normal position.

## RAILROAD SPECIFIC INSTRUCTIONS

## 1. COMPANY OFFICERS: See inside front cover

2. EMERGENCY TELEPHONE NUMBERS: See inside front cover

## 3. DETECTOR MESSAGE AND TRAIN CREW ACTION

The type and location of all trackside detectors will be listed for each subdivision.
SYMBOL TYPE OF DETECTOR
E-1....... Hot Box Talker
E-2.......Dragging Equipment Talker
F-1.......Dragging Equipment Talker
F-2.......High/Wide Load Talker
Following detector instructions apply:
A. Train speed of at least 10 MPH must be maintained while train is moving over hot box detector when possible.
B. Do not stop over hot box detector when possible.
C. Avoid braking, if possible, while approaching or passing hot box detector. Excessive braking may cause false indication.
D. When a trackside detector has been activated, train must be stopped and inspection must be made. When a hot box detector has been activated, after stopping the train to allow a crew member to detrain, the train may move ahead, not exceeding 5 MPH , to the location of the indicated hot journal under the following conditions:

- It is not the second activation on the same car;
- Train is not a KEY train;
- While stopping, a visual observation of the train indicated no smoke, flame or abnormal amount of dust;
- Indicated axle will not pass over switch or structure.
E. When a detector gives an axle count of defect location and defect is not located at the reported axle location, crew must inspect 20 axles ahead and 20 axles behind the axle indicated on both sides. If axle location is not provided, crew must inspect both sides of entire train for the indicated defect.
F. If train stops, or if speed is below 10 MPH while passing a hot box detector and train subsequently receives a hot box indication, all bearings on both sides of entire train must be inspected. An additional inspection is not required when train clears detector location, regardless of message received.
G. A train which receives defect message and stops to inspect for indicated defect prior to clearing detector does not have to perform a second inspection if leaving message is a repeat of the original message.
H. When inspecting for hot bearings, check each roller bearing requiring inspection by use of a tempilstik, if available, on the bearing cup (exposed underside of bearing). If tempilstik melts, car must be set out. If tempilstik is not available and no obvious sign of overheating is
present on axle indicated, cautiously place bare hand on truck side frame working hand toward roller bearing end cap, keeping in mind that any part of this equipment may be extremely hot. If bare hand cannot be held on side frame or roller bearing for a few seconds, car must be set out.
I. Connecting crew, when possible, must be notified of a car that experiences a false hot box detector actuation.
J. When a car experiences two false hot box detector actuations, car must be set out at first available track.
K. When setting out a car suspected of having a hot bearing, attach a fluorescent tag or other marker as close as possible to the hot bearing. Report the journal size of the car to the train dispatcher.
L. When trackside detector has been activated and axle location of defect received, crew must physically count axles from head end of train to indicated axle. Do not determine the location of indicated axle in any other manner.
M. If defect is located and it cannot be corrected, car must be set out at the first available track provided it is safe to be moved.
Type E \& F: Radio Readout (talker) detector:
When movement over an F-2 detector begins, the system should transmit the following entering example message:
"CORP detector milepost 121.3, detector working"
Type E detectors report the axle count location of a defect from the front of the train.
Type F detectors do not report the axle count.
If defect is detected during movement, the system will immediately transmit a defect message.

Type E Example: "CORP detector milepost 121.3, Stop your train! Stop your train! First hot box axle 210 on left side"
Type F Example: "CORP detector milepost 121.3. Stop your train! Stop your train! Dragging equipment."
When train has cleared the detector, the defect message will be transmitted an additional two times. If defect messages are received during passage of train over the detector site and the end of train message combines defect reports with the phrase "Detector Malfunction" train must be stopped and entire train must be inspected on both sides for the type(s) normally detected by that detector.
Example: "CORP detector milepost 121.3, Stop your train! Stop your train! First hot box axle 210 on left side, detector malfunction"
When train has passed the detector with no defects found, the system will transmit "no defect" message.
Example: "CORP detector milepost 121.3 no defects."
When detector is not functioning properly, it will transmit "CORP detector milepost 121.3, detector malfunction"
After receiving a "No Power" message, notify the train dispatcher.

## Decision Tables:

The following charts outline aspects and specific conditions of Type E \& F trackside detectors. Across the top of each chart are listed the aspects and specific conditions. Each of these are independent of one another. To determine the required action for each, follow vertically down the chart below each column to each box that has an entry. These are the
symbols for the types of detectors requiring action for that specific aspect or condition. To determine the required action, follow the entry line to the right.
See chart on page 24

SISKIYOU SUBDIVISION:
Between Medford and Black Butte 97.8

## B. TIME COMPARISON, GCOR 1.48:

Correct time may be obtained from Union Pacific Timer Service (402) 271-4601.
C. MARKERS RULE 5.10:

When a train is set out clear of the main track somewhere other than a crew change location, a crew member must remove the end of the train telemetry device, if so equipped and transport the device on the engine to the destination where the crew is relieved. If the engine remains with the train, a crew-member must deliver the end of train telemetry device to the
proper authority at the tie-up point. However, proper authority may advise the crew to leave the device with the train. Always notify the train dispatcher of the location of the telemetry device.

## D. BLOCK SIGNAL WITH "P" PLATE:

A block signal equipped with a triangular plate displaying the letter $P$ can be actuated by a special protective device. When a signal equipped with a "P" plate, displays a red aspect, in addition to complying with other applicable signal rules, an inspection from the ground must be made of track or structure for which protection is provided to be sure it is safe for the passage of trains.
EXCEPTION: An inspection from the ground is not required when it can be determined from the engine that the track or structure for which the protection is required is safe for the passage of the train. Number or location of each signal equipped with a "P" plate will be shown in timetable, with a description of the special protective device equipped to that signal.

## E. KICKING CARS:

No more than 2 loaded or 5 empty cars can be kicked at one time.

## F. ENTERING MAIN TRACK AT HAND-OPERATED OR SPRING SWITCH RULE 9.17:

5 minute wait is not required when Rule 6.13 is in effect.
G. OCCUPYING SAME TRACK WARRANT LIMITS RULE 14.4:

Item \#1 is not applicable.
H. RULE 14.13:

Add the following: Repetition is required when track warrants are transmitted mechanically.

## I. HIGHLY VISIBLE CLOTHING:

All employees are required to wear and have visible, high visible clothing or vest with reflective stripes at all times while on or near the railroad tracks, except while in locomotive cabs or vehicles.

## J. EQUIPMENT RESTRICTIONS:

Six axle locomotives may operate on Main Track, Yard Tracks and Auxiliary Tracks between Black Butte and Springfield Jct.
Six axle locomotives must not operate on industry tracks.
Tank cars placard dangerous or hazardous must not operate between MP 426 and MP 394 without approval from the General Manager.

Cars bearing "Exceed Plate C" symbol or words "Excess Height" or cars 85 feet or longer, except when excessive dimension clearance message is obtained these cars may be operated in accordance with restrictions, if any, contained in message.
"Plate C" symbol bulkhead flat cars 60 feet or longer with bulkheads 15 feet or higher, may be moved if high/wide clearance is obtained. Bulk-head flat cars SSW 87500 through 88399 inclusive and all center beam cars may move empty or loaded without clearance provided when loaded, load does not extend beyond sides or higher than bulkheads.
When train tonnage exceeds 3,600 tons, each of the first five cars behind the road engine must weigh 50 tons or more unless there are no loaded cars in the train.

When train is to be interchanged with Union Pacific for movement to Roseville and tonnage exceeds 4,100 tons, each of the first five cars behind the road engine must be 73 feet or less in length.

Entrain the following cars with no more than 3,000 trailing tons:

- Empty car exceeding 73 feet in length;

TOFC/COFC flat car loaded on one end only;

- Articulated double-stack car having one or more empty platforms;
- Loaded two-axle inter-modal car weighing 25 tons or more;
- Loaded or empty multi-platform articulated spine.

Foreign line cupola cabooses may not operate between Hilt and Cornutt, without obtaining an excessive dimension clearance.

When in possession an excessive dimension clearance message for a car otherwise prohibited, the car may be handled in accordance with instructions contained in the message.
Do not handle TOFC/COFC cars measuring 79 to 89 feet in length if the load exceeds the following dimensions:

- $79 \mathrm{ft}-85 \mathrm{ft}$ cars maximum height 14 ' 8 " ATR, 8 ' 8 " wide
- 89 ft cars maximum height $14^{\prime} 8^{\prime \prime}$ ATR, 8 '0" wide.

## K. HEAT RESTRICTIONS:

Maintenance of Way personnel are responsible for monitoring temperatures across the railroad and notifying the ARDC when restrictions should be placed and removed.

- Roseburg Subdivision: MP 509 - MP 644.3

1. When the ambient temperature reaches, or is above 105 degrees $F$;
a. No train movement allowed until ambient temperature drops below 100 degrees $F$.
2. When ambient temperature reaches, or is above 95 degrees $F$;
a. All trains to precede not exceeding 10 MPH .
3. When the ambient temperature reaches, or is above 90 degrees $F$;
a. Special hot weather inspections are to be initiated to inspect track for signs of tight rail, thermal misalignments, between the hours of 1200 and 2000 hours.
b. Inspections should be focused of areas of past tight rail incidents, CWR locations, in and out of fixed objects (i.e. open deck bridge), vertical curves, grades, small rail/weak track, etc...
c. Specific hot weather inspection plans are the responsibility of local engineering and maintenance employees to develop and implement.

## - Roseburg Subdivision MP 441.8 - MP 509 And Entire Siskiyou Subdivision

1. When ambient temperature reaches or is above 110 degrees $F$;
a. No train movement allowed until ambient temperature drops below 100 degrees $F$.
2. When ambient temperature reaches or is above 100 degrees $F$;
a. All trains to precede not exceeding 10 MPH .
3. When ambient temperature reaches, or is above 95 degrees $F$;
a. Special hot weather inspections are to be initiated to inspect track for signs of tight rail, thermal misalignments, between the hours of 1200 and 2000 hours.
b. Inspections should be focused of areas of past tight rail incidents, CWR locations, in and out of fixed objects (i.e. open deck bridge), vertical curves, grades, small rail/weak track, etc...
c. Specific hot weather inspection plans are the responsibility of local engineering and maintenance employees to develop and implement.

## L. MOVEMENT OF HIGH/WIDE LOADS:

A high/wide load may move in a train only after the crew receives an excessive dimension clearance message or a crew member ascertains any applicable restrictions from the train dispatcher.

Crew member must advise train dispatcher and other crew members that train contains a high/wide load. Until the train dispatcher has been notified, the crew member is responsible for protection against other wide loads.
Clearance message will contain all restrictions encountered over the entire route of movement.

When necessary to set out a high/wide load en route between terminals, place the load on a track which will provide sufficient clearance from the main track. Advise the train dispatcher that car is being set out.
The inbound crew of a train containing a high/wide load must determine that a crew-member of the relieving or outbound crew has a copy of the clearance message.

When handling a high/wide load, the crew is responsible for compliance with all restrictions in the excessive dimension clearance message. A train must not pass a location where a restriction is shown for the meeting or passing of trains without authority from the train dispatcher. The train dispatcher will not grant such authority until it is known no restricted meet or pass will occur at that location. The train dispatcher will assume responsibility for the safe movement of a high/wide load at the restricted meet or pass location when granting such authority.

Trains operating on the Siskiyou Subdivision with loaded chip hoppers entrained may operate at Maximum Authorized Speed unless other restrictions require a lower speed.
Trains operating on the Roseburg Subdivision with loaded chip hoppers entrained may operate at 20 MPH unless other restrictions require a lower speed.

## M. SECURING EQUIPMENT:

At all locations the minimum number of handbrakes on unattended cuts of three or less cars is $100 \%$, on cuts of more than three cars, tie three brakes unless the grade chart requires more.

| RULE | ASPECTS | CORP | NAME | INDICATION |
| :---: | :---: | :---: | :---: | :---: |
| 9.1.1 |  | 98 | Clear | Proceed |
| 9.1.2 | $)^{\circ} \mathrm{P}$ |  | Approach Medium | Proceed, approaching next signal at 30 MPH. |
| 9.1.3 |  | 8 | Approach | Proceed, preparingto stop at next signal. Trains exceeding 30MPH mustat once reduce speed. Reduction to 30 MPH before passing sigmal. |
| 9.1.4 | for |  | Medium Clear | Proceed, 30 MPH within inter lock ing limits or through turnout. |
| 9.1.5 | 8 |  | Medium Approach | Proceed at 30 MPH preparing to stop at next signal. |
| 9.1.6 |  |  | $\begin{aligned} & \text { Slow } \\ & \text { Clear } \end{aligned}$ | Proceed, 10 MPH within inter locking limits or through turnout. |
| 9.1.7 |  | + ${ }^{9}$ | Restricting | Proceed at restricted speed. |
| 9.1.8 | $\begin{aligned} & 9 \\ & 9 \end{aligned}$ |  | Stop and Approach | Stop, then proceed at restricted speed |
| 9.1.9 |  |  | Stop | Stop. |
| 9.1.10 | NOTE: Lighted "S" or flashing light is used in conjunction with block or interlocking signal. |  | Take (or leave) Siding | Be governed by signal indication. Take (or leave) siding when "S" lighted or light flashing NOTE: Lighted " $S$ " or fla slining light is used in conjumction with a block or interlocking sigmal |
